Profile

Java Full Stack Developer with 4 years of experience building backend services and contributing to frontend applications. Skilled in developing REST APIs using Spring Boot and creating UI components using Angular. Experience working on fintech systems, improving performance, and supporting production deployments. Comfortable working across backend, frontend, and deployment environments in Agile teams.

Work Experience

Societe Generale Global Solution Centre

July 2025 to Present

Software Engineer (Full Stack)

- Developed and maintained **Spring Boot microservices** for trade processing and regulatory reporting.
- Automated reconciliation workflows using **Spring Batch**, improving operational efficiency.
- Optimized PostgreSQL queries to enhance system performance and reduce response time.
- Contributed to Angular-based internal tools for monitoring and reporting dashboards.
- Deployed services using **Docker and Kubernetes** in Linux environments.
- Improved code quality and test coverage using JUnit, Mockito, and SonarQube.

Pay10 Global

June 2024 to June 2025

Java Full Stack Developer

- Built backend services for **payment gateway systems** handling high-volume transactions.
- Designed and enhanced REST APIs for transaction lifecycle (initiate, authorize, settlement).
- Developed Angular UI components for transaction tracking and user workflows.
- Implemented authentication and validation mechanisms to ensure secure transactions.
- Worked on performance tuning and bug fixes across both backend and frontend.
- Supported CI/CD-based deployments and production issue resolution.

iProgrammer Solutions

Nov 2021 to June 2024

Java Developer

- Developed a **full stack hotel booking application** using Spring Boot and Angular.
- Designed REST APIs and integrated them with frontend components.
- Implemented features such as user authentication, hotel search, booking, and cancellation.
- Followed layered architecture ensuring maintainable and scalable code.

Education

Bachelor of Technology (B.Tech) - Computer Science

Biju Patnaik University of Technology (BPUT)

Projects

Personal Account Dealing (PAD) Trading Platform

- Implemented **Escalated Pending** feature to track delayed trade approvals, improving visibility for operations teams.
- Integrated **Kafka-based messaging service** for asynchronous communication between trade processing systems.
- Enhanced Angular UI by adding Escalated Pending button with **hover-based tooltip/pop-up** for better user experience.
- Worked on backend and frontend changes to support real-time trade status updates and dashboard improvements.
- Automated trade workflow processes using **BPMN-based workflow configuration**, reducing manual intervention.
- Actively handled **production issues**, debugging and fixing trade-related edge cases.
- Delivered demo updates to stakeholders across **EMEA and AMER regions** during sprint reviews.
- Worked on real trade scenarios including submission, approval, rejection, and compliance validation.
- Followed Agile methodology and participated in sprint planning, daily stand-ups, and retrospectives.

Payment Gateway Platform

- Developed backend services to support multiple payment modes including **UPI, QR Code, Cards, and Net Banking**.
- Designed and implemented APIs for complete transaction lifecycle: initiation, authorization, capture, and settlement.
- Integrated secure validation and authentication mechanisms for transaction processing.
- Contributed to frontend integration for payment flows and transaction status handling.
- Worked on performance improvements to ensure smooth handling of high-volume transactions.
- Supported production deployments and resolved transaction-related issues in live environments.

Skills

- Java, SQL, JavaScript (basic), TypeScript (basic)
- Spring Boot, Spring MVC, Spring Security, Hibernate
- Angular, HTML, CSS
- Microservices, REST APIs
- PostgreSQL, MySQL
- Docker, Kubernetes (basic), AWS (EC2, S3), Git, Postman
- JUnit, Mockito
- OOP, SDLC, API Design, System Integration
